

### Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

### Listing of Claims:

---

C 1. (Currently Amended) A method for visualizing identifying various components of a web architecture framework using an electronic display device to facilitate assessment of the components as part of a comprehensive, integrated solution system for building, management, and support purposes comprising the steps of:

(a) identifying strengths, weaknesses, and feature coverage of a product or service;

(b) (a) displaying on an electronic display device a pictorial representation of a web architecture framework system including a plurality of components for building other components, managing the system and its components, and supporting other components of the web architecture framework system;

(c) (b) presenting information relating to building the components of the system the coverage of the product or service by non-textually indicia coding the components on the pictorial representation to indicate the availability of those components through the product or service which components may be used to build other components;

(d) (e) presenting information relating to strengths of a product or service managing the components of the system by non-textually indicia coding the components on the pictorial representation to indicate which strengths of the products or services in relation to the coded components may be used to manage the system and its components; and

(e) (d) presenting information relating to weaknesses of a product or service supporting the components of the system by non-textually indicia coding the components on the pictorial representation to indicate which weaknesses of the product or service in relation to the coded components may be used to support other components of the system.

wherein indicia coding the components facilitates assessment of the components as part of a comprehensive, integrated web architecture solution.

2. (Currently Amended) The method of claim 1 A method for identifying various components of a system for building, management, and support purposes as recited in claim 1,

wherein the step of presenting information relating to the coverage of a product or service including presenting information relating to the availability of building, management, and support information presented and conveyed relates to deliverable features of one or more products or services in a business offering.

3. (Currently Amended) The method of claim 2 ~~A method for identifying various components of a system for building, management, and support purposes as recited in claim 2,~~ wherein the features are assigned a unique indicia coding to indicate ~~listed in terms of the~~ components to which the features relate.

4. (Currently Amended) The method of claim 1 ~~A method for identifying various components of a system for~~ wherein the step of presenting information relating to strengths of a product or service includes coding the components to indicate which components relate to building, management, and support of other components ~~purposes as recited in claim 3, wherein the features included in the business offering are indicia coded.~~

5. (Currently Amended) The method of claim 1 ~~A method for identifying various components of a system for building, management, and support purposes as recited in claim 1,~~ wherein the components of the existing web architecture framework system ~~are selected from the group of components including security services, network services, web services, client services, integration capabilities, data services, directory services, management services, operation services, and developer services.~~

6. (Currently Amended) The method of claim 1 ~~A method for identifying various components of a system for building, management, and support purposes as recited in claim 1,~~ wherein the components of the existing web architecture framework system ~~are selected from the group of components including commerce-related services, content-related services, administration-related services, customer-related services, and education-related services.~~

7. (Currently Amended) The method of claim 1 ~~A method for identifying various components of a system for building, management, and support purposes as recited in claim 1,~~

wherein the indicia coding is selected from the group of indicia coding including texture coding, color coding, and shading coding.

8. (Currently Amended) The method of claim 1 wherein the step of presenting information relating to weaknesses of a product or service includes coding the components to indicate which components relate to features that are not available in one or more products or services. A method for identifying various components of a system for building, management, and support purposes as recited in claim 1, wherein the existing system is a web architecture framework.

9. (Currently Amended) The method of claim 1 ~~A method for identifying various components of a system for building, management, and support purposes as recited in claim 1,~~ wherein a legend is presented which defines the indicia coding with respect to building, management, and support deliverables in a business offering.

10. (Currently Amended) A computer program embodied on a computer readable medium for visualizing identifying various components of a web architecture framework on an electronic display device to facilitate assessment of the components as part of a comprehensive, integrated solution system for building, management, and support purposes comprising:

(a) a code segment that identifies strengths, weaknesses, and feature coverage of a product or service;

(b) (a) a code segment that displays on an electronic display device a pictorial representation of a web architecture framework system including a plurality of components of a web architecture framework ~~for building other components, managing the system and its components, and supporting other components of the system;~~

(c) (b) a code segment that presents information relating to the coverage of a product or service ~~building the components of the system~~ by non-textually indicia coding the components on the pictorial representation to indicate the availability of those components through the product or service ~~which components of the system may be used to build other components of the system;~~

(d) ~~(e)~~ a code segment that ~~conveys~~ presents information relating to strengths of a product or service ~~managing the components of the system~~ by non-textually indicia coding the components on the pictorial representation to indicate ~~which~~ strengths of the products or services in relation to the coded components may be used to manage the system and its components; and

(e) ~~(d)~~ a code segment that presents information relating to weaknesses of a product or service ~~supporting the components the system~~ by non-textually indicia coding the components on the pictorial representation to indicate ~~which~~ weaknesses of the product or service in relation to the coded components may be used to support other components of the system

wherein indicia coding the components facilitates assessment of the components as part of a comprehensive, integrated web architecture solution.

11. (Currently Amended) The computer program of claim 10 ~~A computer program for identifying various components of a system for building, management, and support purposes as recited in claim 10~~, wherein the code segment that presents information relating to the coverage of a product or service presents information relating to the availability of building, management, and support information presented and conveyed relates to deliverable features of one or more products or services in a business offering.

12. (Currently Amended) The computer program of claim 10 ~~A computer program for identifying various components of a system for building, management, and support purposes as recited in claim 11~~, wherein the features are assigned a unique indicia coding to indicate listed in terms of the components to which the features relate.

13. (Currently Amended) The computer program of claim 10 ~~A computer program for identifying various components of a system for~~ wherein the step of presenting information relating to strengths of a product or service includes coding the components to indicate which components relate to building, management, and support of other components ~~purposes as recited in claim 12, wherein the features included in the business offering are indicia coded.~~

14. (Currently Amended) The computer program of claim 10 ~~A computer program for identifying various components of a system for building, management, and support purposes~~

as recited in claim 10, wherein the components of the existing web architecture framework system are selected from the group of components including security services, network services, web services, client services, integration capabilities, data services, directory services, management services, operation services, and developer services.

15. (Currently Amended) The computer program of claim 10 ~~A computer program for identifying various components of a system for building, management, and support purposes as recited in claim 10,~~ wherein the components of the existing web architecture framework system are selected from the group of components including commerce-related services, content-related services, administration-related services, customer-related services, and education-related services.

16. (Currently Amended) The computer program of claim 10 ~~A computer program for identifying various components of a system for building, management, and support purposes as recited in claim 10,~~ wherein the indicia coding is selected from the group of indicia coding including texture coding, color coding, and shading coding.

17. (Currently Amended) The computer program of claim 10 wherein the step of presenting information relating to weaknesses of a product or service includes coding the components to indicate which components relate to features that are not available in one or more products or services. ~~A computer program for identifying various components of a system for building, management, and support purposes as recited in claim 10, wherein the existing system is a web architecture framework.~~

18. (Currently Amended) The computer program of claim 10 ~~A computer program for identifying various components of a system for building, management, and support purposes as recited in claim 10,~~ wherein a legend is presented which defines the indicia coding with respect to building, management, and support deliverables in a business offering.

19. (Currently Amended) A system for visualizing identifying various components of a web architecture framework on an electronic display device to facilitate assessment of the components as part of a comprehensive, integrated solution system for building, management, and support purposes comprising:

(a) a logic processor for identifying strengths, weaknesses, and feature coverage of a product or service;

(b) ~~(a)~~ a logic processor means for displaying on an electronic display device a pictorial representation of a web architecture framework system including a plurality of components of a web architecture framework, at least some of the components being usable to build other components of the system;

(c) ~~(b)~~ a logic processor means for presenting information relating to the coverage of a product or service building the components of the existing system by non-textually indicia coding the components on the pictorial representation to indicate the availability of those components through the product or service which components of the system may be used to build other components of the system;

(d) a logic processor for presenting information relating to strengths of a product or service by non-textually indicia coding the components on the pictorial representation to indicate strengths of the products or services in relation to the coded components; and

(e) a logic processor for presenting information relating to weaknesses of a product or service by non-textually indicia coding the components on the pictorial representation to indicate weaknesses of the product or service in relation to the coded components

wherein indicia coding the components facilitates assessment of the components as part of a comprehensive, integrated web architecture solution.
